NOTE.—Full instructions respecting the measurement of rain, and every detail connected therewith, are given in a little pamphlet, entitled, "*Arrangements for the Systematic Observation and Record of the Rainfall of the British Isles,*" which is supplied *gratis* on application to Mr. G. J. SYMONS, 62, Camden Square, London, N.W.

Accurate observers of rainfall will oblige by sending a copy of their record to Mr. G. J. SYMONS, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from about 2,000 stations.

Additional Copies of this form (price 3d. each) can be obtained of the above, from Mr. STANFORD, 55, *Charing Cross, and from all the leading opticians.*

EXPLANATION.—The Barometric readings are corrected for Altitude and Temperature, and may therefore be compared with other "corrected" readings. The Maximum Temperature, both in shade and sun, are read at 9 p.m., and are the highest temperatures *registered* during the previous 24 hours. The Minimum is read at 9 p.m. and shows the lowest temperature *registered* during the previous 24 hours.

METEOROLOGICAL OBSERVATIONS made at the Gardens of the Royal Botanic Society of London, Inner Circle, Regent's Park, during the month of APRIL, 1896.

EXPLANATION.—The Barometric readings are corrected for Altitude and Temperature, and may therefore be compared with other "corrected" readings. The Maximum Temperature, both in shade and sun, are read at 9 p.m., and are the highest temperatures *registered* during the previous 24 hours. The Minimum is read at 9 p.m. and shows the lowest temperature *registered* during the previous 24 hours.

source of glass; Pliny tells us that tradition referred its discovery thereto, by Phœnician sailors using blocks of natron to rest their cauldron upon, when the sand and the alkali were fused into glass by the heat. A more probable origin was the using of the plant *Salsola Kali* for fuel, when the same result would occur. It is thought that the prophecy of Moses may be an allusion to it, when, in speaking of Zebulun and Issachar, he said—"They shall suck the abundance of the sea, and the hidden treasure of the sand" (Deut. xxxiii., 19). As a use for making soap several plants might have been taken which contain the alkali. Jeremiah alludes to both the mineral (nether) and the vegetable (borith) in the same passage—(ii., 22), "For though thou wash thee with lye (nether), and take thee much soap (borith), yet thine iniquity is marked before me."

4.—FLOWERS.—Very few plants are mentioned for the sake of their flowers only. "The Lily of the Valley," "the Rose of Sharon," and the Camphire, are all in the Song of Solomon. The Hebrew word *Shushan* and the name *Susannah* point to the white Lily as the most probable plant; while the Greek *Krinon* may refer to the scarlet Martagon Lily of Palestine among the "Lilies of the Field." The Rose of Sharon appears by the Hebrew to be a bulbous plant, and is recognised as the *Colchicum autumnale*, so that when it is said that "The desert shall blossom as the rose," it would mean that the plain would be *covered* with this plant, just as meadows are in Switzerland and elsewhere.

5.—ESCULENT HERBS.—The plants mentioned as used for food are lentils and beans, cucumbers, melons and gourds, onions, leeks and garlic, wheat and spelt (rye), barley and millet. The LENTIL has been cultivated from time immemorial in the East, and formed the substance of Jacob's pottage. BEANS are twice mentioned. The CUCUMBER and MELON said to have grown in Egypt (Num. xi., 5), were probably forms of Gourds, as according to A. de Candolle in his "Origin of Cultivated Plants," there is no trace of their having been found in ancient Egypt. ONIONS, LEEKS, and GARLIC were cultivated there, and Herodotus tells us the quantity supplied to the builders of the Great Pyramid (about 3,300 B.C.). Of WHEAT we often read, and that Egypt was the granary of the East. It still grows the same varieties as of old. The "rie" mentioned as not injured during the plagues, is believed to be a small eared form known as *Triticum monococcum*, and is probably the only form of wheat known wild in Mesopotamia. The seven good ears growing on one stalk is descriptive of the variety *mirabile* or *compositum*, which is still grown and known as "Egyptian wheat." This has nothing to do with the so-called "Mummy" wheat, which consists of grain placed in little jars within the tombs as an offering to the dead. All attempts to make this germinate have completely failed. The BARLEY grown in Eastern countries is the six-rowed variety. It is pulled green as fodder for horses, but the grain was early used in Egypt for the manufacture of a kind of beer. Millet is mentioned by Ezekiel (iv., 9). It is the *Panicum mileaceum* of botanists. Several grasses are now cultivated as "Millets," but it is not known when they were introduced into various countries of the East.

(To be continued.)

EXPLANATION.—The Barometric readings are corrected for Altitude and Temperature, and may therefore be compared with other "corrected" readings. The Maximum Temperature, both in shade and sun, are read at 9 p.m., and are the highest temperatures *registered* during the previous 24 hours. The Minimum is read at 9 p.m. and shows the lowest temperature *registered* during the previous 24 hours.

METEOROLOGICAL OBSERVATIONS made at the Gardens of the Royal Botanic Societ[illegible] of London, Inner Circle, Regent's Park, during the month of JUNE, 1896.

EXPLANATION.—The Barometric readings are corrected for Altitude and Temperature, and may therefore be compared with other "corrected" readings. The Maximum Temperature, both in shade and sun, are read at 9 p.m., and are the highest temperatures *registered* during the previous 24 hours. The Minimum is read at 9 p.m. and shows the lowest temperature *registered* during the previous 24 hours.

It is noticeable that the change of form from the young, slender, tubular, open-mouthed pitchers, to inflated, closed-mouthed forms, is abrupt. They correspond to two forms in species of *Sarracenia*.

DROSERACEÆ.*—Darwin has so thoroughly described members of this order and of LENTIBULARINEÆ that the reader is referred to it for full information. The former contains six genera. Three catch their prey by means of viscid glands, viz., *Drosera*, *Drosophyllum*, and *Byblis;* two, *Dionæa* and *Aldrovandra*, by traps. Certain differences are noticeable: thus, while *Drosera* catches and retains an insect by the great viscidity of its glands, in *Drosophyllum* the fluid is not viscid enough, so that the insect crawls about until overcome by the accumulation of fluid about it. Again, the glands are more strongly acid *before* being excited than is the case with *Drosera*.

Three plants are known to have similar rat-trap-like leaves: *Dionæa*, of the United States, the aquatic *Aldrovandra* of Europe, and *Castha dionæfolia* of Hermite Island, South of Terra del Fuego. Of these three, the first two are provided with sensitive bristles, the second has the curious quadrifid processes characteristic of *Utricularia* of the order Lentibularineæ; apparently adapted to absorb decayed animal matters.

The conclusion arrived at from the presence of identically the same structures in plants either of no affinity, or occurring in widely distant places in the world, is that similar circumstances have given rise to similar structures; or, in other words, that the protoplasm has been able to construct similar organs to meet like requirements.

NEPENTHEÆ.—The sole genus of this order is *Nepenthes*, occurring round the Indian Ocean, but especially the Malay Archipelago. The pitchers are extraordinary in being hypertrophied water-glands situated at the apex of the blade, the tip of which first runs out into a long tendril-like rod which carries the pitcher at the end of it. This is half full of water before the "lid" opens: "In the interior there are three principal surfaces, an *attractive*, *conductive*, and a *secretive* surface; the *detentive* surface of Sarracenia being represented by the fluid secretion, which is invariably present at all stages of growth of the pitcher."†

---

* *Insectivorous plants.*—The genera discussed by Darwin are *Drosera*, *Dionæa*, *Aldrovandra*, *Drosophyllum*, *Roridula*, *Byblis;* and of LENTIBULARINEÆ, he describes *Pinguicula*, *Utricularia*, *Polypompholy* and *Genlisea*.

† Address to the Dept. of Zool. and Bot. of the Brit. Assoc. Belfast, 1874, by Dr. Hooker, C.B., Pres. R. S.

EXPLANATION.—The Barometric readings are corrected for Altitude and Temperature, and may therefore be compared with other "corrected" readings. The Maximum Temperature, both in shade and sun, are read at 9 p.m., and are the highest temperatures *registered* during the previous 24 hours. The Minimum is read at 9 p.m. and shows the lowest temperature *registered* during the previous 24 hours.

METEOROLOGICAL OBSERVATIONS made at the Gardens of the Royal Botanic Socie[illegible] of London, Inner Circle, Regent's Park, during the month of SEPTEMBER, 1896.
